General Description

These analog multiplexers/demultiplexers are digitally controlled analog switches having low "ON" impedance and very low "OFF" leakage currents. Control of analog signals up to 15V_{p-p} can be achieved by digital signal amplitudes of 3–15V. For example, if V_{DD} = 5V, V_{SS} = 0V and V_{EE} = –5V, analog signals from –5V to +5V can be controlled by digital inputs of 0–5V. The multiplexer circuits dissipate extremely low quiescent power over the full V_{DD}–V_{SS} and V_{DD}–V_{EE} supply voltage ranges, independent of the logic state of the control signals. When a logical "1" is present at the inhibit input terminal all channels are "OFF".

CD4051BM/CD4051BC is a single 8-channel multiplexer having three binary control inputs, A, B, and C, and an inhibit input. The three binary signals select 1 of 8 channels to be turned "ON" and connect the input to the output.

CD4052BM/CD4052BC is a differential 4-channel multiplexer having two binary control inputs, A and B, and an inhibit input. The two binary input signals select 1 or 4 pairs of channels to be turned on and connect the differential analog inputs to the differential outputs.

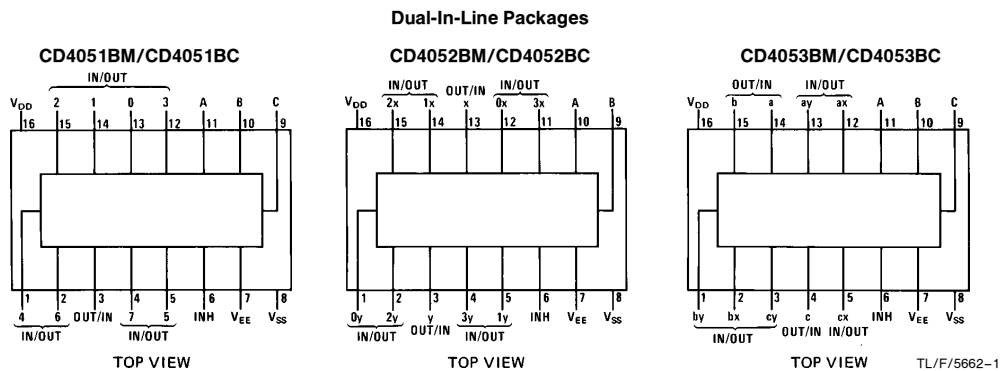

CD4053BM/CD4053BC is a triple 2-channel multiplexer having three separate digital control inputs, A, B, and C, and

an inhibit input. Each control input selects one of a pair of channels which are connected in a single-pole double-throw configuration.

Features

- Wide range of digital and analog signal levels: digital 3–15V, analog to 15V_{p-p}
- Low "ON" resistance: 80Ω (typ.) over entire 15V_{p-p} signal-input range for V_{DD}–V_{EE} = 15V
- High "OFF" resistance: channel leakage of ±10 pA (typ.) at V_{DD}–V_{EE} = 10V
- Logic level conversion for digital addressing signals of 3–15V (V_{DD}–V_{SS} = 3–15V) to switch analog signals to 15 V_{p-p} (V_{DD}–V_{EE} = 15V)
- Matched switch characteristics: ΔR_{ON} = 5Ω (typ.) for V_{DD}–V_{EE} = 15V
- Very low quiescent power dissipation under all digital-control input and supply conditions: 1 μW (typ.) at V_{DD}–V_{SS} = V_{DD}–V_{EE} = 10V
- Binary address decoding on chip

Special Considerations

In certain applications the external load-resistor current may include both V_{DD} and signal-line components. To avoid drawing V_{DD} current when switch current flows into IN/OUT pin, the voltage drop across the bidirectional switch must

not exceed 0.6V at $T_A \leq 25^\circ\text{C}$, or 0.4V at $T_A > 25^\circ\text{C}$ (calculated from R_{ON} values shown). No V_{DD} current will flow through R_L if the switch current flows into OUT/IN pin.

Typical Performance Characteristics

“ON” Resistance vs Signal Voltage for $T_A = 25^\circ\text{C}$

“ON” Resistance as a Function of Temperature for $V_{DD} - V_{EE} = 15\text{V}$

“ON” Resistance as a Function of Temperature for $V_{DD} - V_{EE} = 10\text{V}$

“ON” Resistance as a Function of Temperature for $V_{DD} - V_{EE} = 5\text{V}$

Figure 1: Plan view of the test assembly. The diagram shows a rectangular assembly with 16 numbered pins (1-16) around its perimeter. Dimensions are given in inches and millimeters. The top width is 0.386 - 0.394 (9.804 - 10.00). The left height is 0.228 - 0.244 (5.791 - 6.198). The bottom right corner has a 30° TYP angle and a 0.010 MAX (0.254) dimension. A lead wire is labeled "LEAD NO. 1 IDENT".

LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
